Work Eligibility: Full right to work in the EU (Spouse of EU Citizen); US Citizen

PROFILE

Behavioral data scientist and measurement methodologist. I design rigorous measurement systems and causal inference infrastructure that connect latent constructs to behavioral outcomes at scale. Expertise in Bayesian multilevel modeling, experimental & quasi-experimental design, and survey methodology, applied to product measurement, brand strategy, and trust & safety.

EXPERTISE

- **Causal Inference & Experimentation:** Difference-in-differences, synthetic control, regression discontinuity, instrumental variables, doubly robust estimation, A/B testing.
- **Bayesian Methods:** Multilevel/hierarchical modeling, MRP and post-stratification, sequential monitoring, variational inference, prior specification, posterior predictive checks.
- **Measurement & Psychometrics:** Scale development and validation (EFA/CFA/IRT), construct measurement, survey instrument design, sampling methodology, nonresponse adjustment, mode effects.
- **Technical:** R, Python (TensorFlow Probability, Pandas, Scikit-learn), SQL, Git.

PROFESSIONAL EXPERIENCE

Google (YouTube) 2026–Present
Staff Behavioral Data Scientist & Technical Lead San Bruno, CA

- Own the measurement roadmap for YouTube Marketing, setting methodological standards for how the organization quantifies brand impact on user behavior.
- Design and validate survey instruments measuring latent perception constructs linked to platform behavioral data; build and maintain the end-to-end analytical pipeline from data extraction through psychometric validation (EFA/CFA) to downstream analysis.
- Lead causal impact estimation for brand marketing investments using difference-in-differences with doubly robust adjustment on a metered panel with individual-level ad exposure; design and analyze geo-randomized matched market tests with synthetic control and cluster-robust inference.
- Develop a Bayesian MrP framework in TensorFlow Probability that produces population-representative estimates from non-probability survey panels, using sequential prior updating across measurement waves to improve precision and optimize sampling costs.
- Provide technical oversight and mentorship to a 30+ person Data Science and Insights team on experimental design, survey methodology, and causal inference.

Google 2023–2026
Senior Quantitative UX Researcher San Francisco, CA

- Developed a quantitative measurement framework for Advertiser Trust, integrating attitudinal survey constructs with behavioral signals into a composite metric adopted as a core goal across 12+ product areas.
- Applied observational causal inference (matching, doubly robust estimation, instrumental variables) to quantify the impact of trust perceptions on revenue-relevant outcomes including feature adoption and retention.
- Designed processes for incorporating survey-based attitudinal measures into A/B testing pipelines using Bayesian sequential updating, enabling teams to evaluate subjective experience alongside behavioral metrics.

Meta 2020–2023
People Research Scientist (Trust & Safety) San Francisco, CA

- Built a first-of-its-kind measurement program quantifying the psychological impact of sustained exposure to severe and graphic content (including child safety, violence, and self-harm material) on human content reviewers—a hard-to-reach, highly sensitive population.
- Developed novel survey instruments and behavioral indicators for tracking trauma exposure and wellbeing, in partnership with clinical psychologists; validated measurement properties across diverse reviewer populations, content verticals, and time.
- Designed sampling and analysis approaches for a small, sensitive population where standard methods were inadequate, handling nonresponse, confidentiality constraints, and the psychometric complexity of measuring latent trauma-related constructs.
- Translated findings into global policy and operational changes affecting thousands of reviewers; communicated statistical evidence to executive stakeholders and cross-functional trust & safety partners.

EDUCATION

University of Pittsburgh, Learning Research and Development Center 2019–2020
Postdoctoral Research Associate Pittsburgh, PA

Northwestern University 2019
Ph.D., Human Development and Social Policy Evanston, IL
